# Features

---

Thank you for purchasing this American DJ product.

This Aviator-32 features include:

- Serves as a Switch Pack or a 32 channel controller, depending upon the current operating mode.
- Flash button allows to momentarily flash the channel
- Latch button allows to turn on/off or latch the channel
- 3-pin standard DMX IN/OUT ports
- Power failure memory.
- 4 digits Segment Display shows current activity and function state.

# General Instructions

---

## WELCOME!

Thank you for your purchase of this American DJ product.

Please read through this operating instructions before installing or using your new product. After you have finished reading the instructions, put them away in a safe place for future reference.

### **Be sure to follow these instructions when using your unit.**

- This product is intended for indoor use only.
- Please unpack and inspect this unit for any damage. If in doubt, don't use it and contact your local dealer.
- Packaging material(plastic bags, polystyrene foam, nails, etc.) must not be left within children's reach, as it can be dangerous.
- This unit must only be operated by adults. Do not allow children to tamper or play with it.
- Place this unit in a stable location. Never use the unit in places subject to vibrations or bumps.
- Do not make any inflammable liquids, water or metal objects enter this unit.
- Do not expose this unit to strong light, excessive humidity and heat.
- Stop using the unit immediately in the event of serious operation problem and either contact the nearest American DJ dealer for a check or contact American DJ Corp. Inc. directly.
- Never try to repair the unit yourself. Should your unit fail, contact your local American DJ dealer.

Every effort has been made to design dependability, reliability and comfort into each unit. New products are being designed constantly to meet the needs of both entertainment and the lighting industry. We welcome your comments about our products and services.

It is both a privilege and a pleasure serving you.

# 1. Overview

## 1.1 Front Panel

1. Power Switch

This switch turns the main power on and off.

2. Flash Buttons

These 8 Flash buttons are used to bring an individual channel to full intensity.

3. Latch Buttons

These 8 Latch buttons are used to turn on/ off or Latch the corresponding channel.

4. Channel LEDs

These 8 LEDs show the current activity or intensity of the relevant channel.

5. Page LEDs

The LED lights when the page is selected.

6. Page Button

Tap the button to scroll through the four pages until the page is selected.

7. Segment Display

Shows the current programming or function state.

8. Next Button

Tap this button to store the scene you've set as one step and to program next step from 01 to 16.

9. Last Button

Tap this button to revert to the last step.

10. Program Button

The button is used to program or run the chase pattern and disable other function modes.

# 1. Overview

## 1.2 Rear Panel

- |                          |   |
|--------------------------|---|
| 1. Audio Input           | Connects an external audio source directly to the unit. This will provide a more accurate audio source when the internal Mic is not sensitive enough or when the unit is mounted far away from the speaker. |
| 2. Control Output        | These 4 outputs connect to the Relay Pack using 9 pin extension cables.   |
| 3. DMX Polarity Select   | Move to select Data polarity of DMX output.   |
| 4. DMX Output            | This connector sends the DMX signal through to the next DMX device.   |
| 5. DMX Input             | This connector receives DMX signal.   |
| 6. Fog Machine Connector | Connects to the Fog Machine.  |
| 7. DC Input              | This input jack is used to plug in an external power supply (9V-12V DC, 500 mA min.).   |

## 2. Operation Guide

---

### 2.1 Set-Up

1. Connected the supplied 9 pin com cable from the output on the rear of this unit to the input of the power pack.
2. Connect your lighting effects to the channel output on the power pack.
3. Plug in a DMX controller to your unit via the 3-pin XLR cables.
4. After you have made all your connections, turn the main power on.
5. Wait for at least 1 second to turn the main power on a second time.

### 2.2 Basic Operations

#### General

This unit is a 32 channel controller, has 4 Pages of banks, each bank consisting of two separate chase groups for 8 channel output. Each chase group has three operating modes: Pattern Mode, Audio Mode and Logic Mode.

This unit consists of 8 Latch buttons allowing to turn on/off and latch the matching channels, 8 Flash buttons to momentarily turn the corresponding channel on, a Program button enabling you to program a chase pattern including 16 steps x 4 pages, a DMX In button to activate the DMX function.

# 2. Operation Guide

## 2.2.1 Latch Buttons

The 8 Latch buttons are used to turn on/off or latch the matching channel. Latch 1-4 buttons are used for Group 1 while Latch 5-8 buttons for Group 2.

Pressing and holding down the button for two seconds will change the channel between On and Off.

When the channel is Off, the channel goes out regardless of the chase of pattern.

When the channel is On, tap the Latch button to change the channel between On and Latch. If the channel is On, the channel is activated by the chase of pattern. If the channel is Latch, the channel lights regardless of the chase of pattern.

## 2.2.2 Flash Buttons

The 8 Flash buttons are used to momentarily light the corresponding channel.

Pressing and holding down the button will give full intensity to the corresponding channel, release will deactivate this function.

## 2.2.3 Select Chase Group

1. Turn the main power on, the Segment Display shows the operating mode of last change and the Stand By LED blinks.

Tap the Page button to scroll through the 4 pages, the red LED indicates which page you've selected.

# 2. Operation Guide

## 2.2.3 Select Chase Group

2. Tap the Group button to select the chase group from Group 1-2, the Group LED lights indicating the group.

## 2.2.4 Pattern Mode

1. Press the Mode button until the Segment Display shows "PR" followed by two numbers.

2. Tap the Up or Down button to select desired pattern from Patterns 01-16.

## 2. Operation Guide

### 2.2.4 Pattern Mode

3. Tap the Speed button, the Segment Display shows the current chasing speed indicated by three or four numbers.

If the Segment Display shows three digits, the speed is in second cycle.  
For example: 3:00 indicates 3 seconds.

If the Segment Display shows four digits, the speed is in minute cycle.  
For example: 03:00 indicates 3 minutes.

4. Tap the Up or Down button to change the speed from 0.10 second to 10 minutes.

Each tap will change the speed once, and pressing and holding down will change the speed quickly.

**NOTE:** In the course of speed setting, the Logic, Program and DMX In buttons are disabled.

## 2. Operation Guide

### 2.2.5 Audio Mode

1. Press the Mode button until the Segment Display shows "Au" followed by two numbers.

2. Tap the Up or Down button to select desired pattern from Patterns 01-16. The pattern will chase on audio beat and the Speed button is disabled.

### 2.2.6 Logic Mode

In Logic Mode, the "latch" and "flash" function will take the channel out from the chase when the chase is running.

1. Tap the Logic button, the Segment Display shows "Log" indicating Logic mode is active.

# 2. Operation Guide

## 2.2.6 Logic Mode

2. Tap the Speed button, the Segment Display shows "SP" followed by one number from 1-4 indicating channel 1-4.

3. Tap the Speed button a second time to change the channel. Each tap of the Speed button will change the channel once.

4. Tap the Up or Down button to change the speed from 0.10 second to 10 minutes.

Each tap will change the speed once, and pressing and holding down will change the speed quickly.

**NOTE:** In the course of speed setting, the Program and DMX In buttons are disabled.

## 2. Operation Guide

### 2.2.7 DMX Mode

1. Tap the DMX In button, the Segment Display shows "A" followed by three numbers which indicates the DMX address for the starting DMX channel.

Now you can use the unit as a 32 channel DMX pack which allows you to control the turning on or off of the channel 1-32 through the DMX controller. If the DMX value is less than 20%, the channel will go out. If the level amounts to or exceeds 20%, the channel will light.

This unit also allows you to control the Stand By function if the DMX address for channel 33 is available.

2. Tap the Up or Down button to select the DMX address from 001-512. Be sure your DMX controller's address matches the DMX address you've set. If the DMX address is not available for the channel, the channel will go out. For example, if the DMX address is 512, channels 2-31 will go out.

3. Tap the Exit button to exit from DMX mode, this unit will return to normal operating mode.

# 2. Operation Guide

## 2.2.8 Program Mode

- 1. Tap the Program button, the Segment Display shows "PR" followed by "01" which prompts Program mode is active.

- 2. Tap the Page button to select the page indicated by the lit LED.

- 3. Create desired scene by tapping the Latch buttons.

## 2. Operation Guide

### 2.2.8 Program Mode

4. Once the scene is satisfactory, tap the Next button to store the step into memory and you are prompted to program next step.

If you want to change last step, tap the Last button and set the scene again.

5. Repeat step 3 and 4 until you've programmed the desired steps(up to 16 steps).

6. Tap the Program button causing the programmed pattern to chase, the Segment Display shows "RUN".

Tap the Program button a second time to re-program the chase pattern.

7. Tap the Speed button, the Segment Display shows the current chasing speed indicated by three or four numbers.

If the Segment Display shows three digits, the speed is in second cycle.  
For example: 3:00 indicates 3 seconds.

If the Segment Display shows four digits, the speed is in minute cycle.  
For example: 03:00 indicates 3 minutes.

# 2. Operation Guide

## 2.2.8 Program Mode

8. Tap the Up or Down button to change the speed from 0.10 second to 10 minutes.

Each tap will change the speed once, and pressing and holding down will change the speed quickly.

9. Tap the Exit button to exit from the Program mode.

**NOTE:**

When Program mode is active, other function modes, such as Pattern, Audio, Logic and DMX modes will be disabled unless deactivation of Program.

## 2.2.9 Clear Memory

To clear all your memory, press and hold down Latch 8, Flash 5 and Page buttons at a time while turning the main power on.

## 2. Operation Guide

### General

The Aviator-SP8 is a 8 channel DMX switch pack, consisting of a Segment Display and several push buttons that can be used easily. The Aviator-SP8 is controlled via a standard DMX controller, which allows you to control special affect lighting.

The Aviator-SP8 has two different operating modes: Self Test mode and DMX mode. Please follow the instructions below to operate the unit in your desired mode.

#### 2.1 Self Test Mode

1. Turn on the power of the unit, the Segment Display will show the self test speed of last time.

Self test speed is indicated by "SP" followed by numbers 1-9. A value of 1 will give the slowest speed, and the value of 9 will give the fastest speed.

2. Tap the Edit button to increase the speed. Each tap will change the speed once. Pressing and holding down the Edit button will increase the speed quickly.

# 2. Operation Guide

## 2.1 Self Test Mode

3. While pressing and holding down the Edit button, tap the Store button, the speed will be decreased by one.

(If you tap the Store button a second time while pressing and holding down the Edit button, the speed will be increase by one.)

4. Tap the Edit button to decrease the speed. Pressing and holding down the Edit button will decrease the speed quickly.

5. Tap the Store button to store the speed you've set, the Segment Display shows " Stor " appro. 2 seconds.

# 2. Operation Guide

## 2.2 DMX Mode

1. Tap the Menu button to enter next level, the Segment Display shows the DMX address of last time.

The DMX address is indicated by "A" followed by three numbers and tells the DMX controller what channel to activate the pack's functions.

2. Follow the instructions of step 2 and 3 in Self Test Mode to select desired DMX address.

3. Tap the Store button to store the DMX address, the Segment Display shows "Stor" appro. 2 seconds.

## 2. Operation Guide

### 2.2 DMX Mode

4. Tap the Menu button to enter next level, the Segment Display shows the "CH-" followed by any one number from 1, 2, 4 and 8.

This functions allows you to set your dimmer pack to serve as 1,2,4 and 8 channel DMX pack

5. Tap the Edit button to select desired channel function from 1, 2, 4 and 8.
  - a. When "CH-1" appears, all 8 channel is controlled by one DMX channel.
  - b. When "CH-2" appears, every four channel (CH. 1-4, and CH.5-8) is controlled by one DMX channel.
  - c. When "CH-4" appears, every two channel( CH. 1-2, CH. 3-4, CH. 5-6 and CH.7-8) is controlled by one DMX channel.
  - d. When "CH-8" appears, each channel is controlled by one DMX channel.

6. Tap the Store button to store the channel function, the Segment Display shows " Stor " approx. 2 seconds and then returns to channel function.

# 2. Operation Guide

## 2.2 DMX Mode

7. Tap the Menu button to enter next level, the Segment Display shows the current state (OFF / FULL ON) of relevant channel output

8. Tap the Edit button to select desired channel from channels 1-8.

9. While pressing and holding down the Edit button tap the Store button to change channel state between Off and Full On. Each tap changes the state once.

When the channel is "Off", the Segment Display shows "o" in the fourth character and the channel is controlled by the DMX signals.  
When the channel is "Full On", the Segment Display shows "F" in the fourth character and the channel lights at full intensity regardless of the DMX signals.

# 2. Operation Guide

## 2.2 DMX Mode

10. Tap the Store button to store the state of channel, the Segment Display shows " Stor " appro. 2 seconds and then returns to the state of channel.

11. Tap the Menu button, this unit will return to Self Test mode, the Segment Display will show the speed you've set.
