Europe Energy Saving Notice

Energy Saving Matters (EuP 2009/125/EC)

Saving electric energy is a key to help protecting the environment. Please turn off all electrical products when they are not in use. To avoid power consumption in idle mode, disconnect all electrical equipment from power when not in use. Thank you!

DOCUMENT VERSION

Due to additional product features and/or enhancements, an updated version of this document may be available online.

Please check www.adj.com for the latest revision/update of this manual before beginning installation and/or programming.

Date	Document Version	Notes

GENERAL INFORMATION

INTRODUCTION

Please read and understand all instructions in this manual carefully and thoroughly before attempting to operate these products. These instructions contain important safety and use information.

UNPACKING

The products in this kit have been thoroughly tested and have been shipped in perfect operating condition. Carefully check the shipping carton for damage that may have occurred during shipping. If the carton appears to be damaged, carefully inspect each unit included for damage and be sure all accessories necessary to operate the units have arrived intact. In the event damage has been found or parts are missing, please contact our customer support team for further instructions. Please do not return this kit to your dealer without first contacting customer support at the number listed below. Please do not discard the shipping carton in the trash. Please recycle whenever possible.

WARRANTY RETURNS

All returned service items whether under warranty or not, must be freight pre-paid and accompany a return authorization (R.A.) number. The R.A. number must be clearly written on the outside of the return package. A brief description of the problem as well as the R.A. number must also be written down on a piece of paper and included in the shipping container. If the unit is under warranty, you must provide a copy of your proof of purchase invoice. Items returned without a R.A. number clearly marked on the outside of the package will be refused and returned at customer's expense. You may obtain a R.A. number by contacting customer support.

LIMITED WARRANTY (USA ONLY)

- A. ADJ Products, LLC hereby warrants, to the original purchaser, ADJ Products, LLC products to be free of manufacturing defects in material and workmanship for a prescribed period from the date of purchase (see specific warranty period on reverse). This warranty shall be valid only if the product is purchased within the United States of America, including possessions and territories. It is the owner's responsibility to establish the date and place of purchase by acceptable evidence, at the time service is sought.
- B. For warranty service, you must obtain a Return Authorization number (RA#) before sending back the product-please contact ADJ Products, LLC Service Department at 800-322-6337. Send the product only to the ADJ Products, LLC factory. All shipping charges must be pre-paid. If the requested repairs or service (including parts replacement) are within the terms of this warranty, ADJ Products, LLC will pay return shipping charges only to a designated point within the United States. If the entire instrument is sent, it must be shipped in its original package. No accessories should be shipped with the product. If any accessories are shipped with the product, ADJ Products, LLC shall have no liability whatsoever for loss of or damage to any such accessories, or for the safe return thereof.
- C. This warranty is void if the serial number has been altered or removed; if the product is modified in any manner which ADJ Products, LLC concludes, after inspection, affects the reliability of the product, if the product has been repaired or service by anyone other than ADJ Products, LLC factory unless prior written authorization was issued to purchaser by ADJ Products, LLC; if the product is damaged because not properly maintained as set forth in the instruction manual.
- D. This is not a service contract, and this warranty does not include maintenance, cleaning or periodic check up. During the period specified above, ADJ Products, LLC will replace defective parts at its expense with new or refurbished parts, and will absorb all expenses for warranty service and repair labor by reason of defects in material or workmanship. The sole responsibility of ADJ Products, LLC under this warranty shall be limited to the repair of the product, or replacement thereof, including parts, at the sole discretion of ADJ Products, LLC. All products covered by this warranty were manufactured after August 15, 2012, and bear identifying marks to that effect.
- E. ADJ Products, LLC reserves the right to make changes in design and/or improvements upon its products without any obligation to include these changes in any products theretofore manufactured.
- F. No warranty, whether expressed or implied, is given or made with respect to any accessory supplied with products described above. Except to the extent prohibited by applicable law, all implied warranties made by ADJ Products, LLC in connection with this product, including warranties of merchantability or fitness, are limited in duration to the warranty period set forth above. And no warranties, whether expressed or implied, including warranties of merchantability or fitness, shall apply to this product after said period has expired. The consumer's and/or Dealer's sole remedy shall be such repair or replacement as is expressly provided above; and under no circumstances shall ADJ Products, LLC be liable for any loss or damage, direct or consequential, arising out of the use of, or inability to use, this product.
- G. This warranty is the only written warranty applicable to ADJ Products, LLC Products and supersedes all prior warranties and written descriptions of warranty terms and conditions heretofore published.

LIMITED WARRANTY PERIODS

- **Non L.E.D. Lighting Products = 1-year (365 days) Limited Warranty** (Such as: Special Effect Lighting, Intelligent Lighting, UV lighting, Strobes, Fog Machines, Bubble Machines, Mirror Balls, Par Cans, Trussing, Lighting Stands etc. excluding LED and lamps)
- **Laser Products = 1 Year (365 Days) Limited Warranty** (excludes laser diodes which have 6 month limited warranty)
- **L.E.D. Products = 2-year (730 days) Limited Warranty** (excluding batteries which have a 180 day limited warranty)
Note: 2 Year Warranty only applies to purchases within the United States.
- **StarTec Series = 1 Year Limited Warranty** (excluding batteries which have a 180 day limited warranty)
- **ADJ DMX Controllers = 2 Year (730 Days) Limited Warranty**

SAFETY GUIDELINES

This device is a sophisticated piece of electronic equipment. To guarantee a smooth operation, it is important to follow all instructions and guidelines in this manual. ADJ PRODUCTS, LLC. is not responsible for injury and/or damages resulting from the misuse of this device due to the disregard of the information printed in this manual. Only the original included parts and/or accessories for this device should be used. Any modifications to the device, included and/or accessories will void the original manufactures warranty and increase the risk of damage and/or personal injury.

PROTECTION CLASS 1 – DEVICE MUST BE PROPERLY GROUNDED

DO NOT ATTEMPT TO USE THIS DEVICE WITHOUT BEING FULLY TRAINED ON HOW TO USE IT. ANY DAMAGES OR REPAIRS TO THIS DEVICE OR ANY LIGHTING FIXTURES CONTROLLED BY THIS DEVICE RESULTING FROM IMPROPER USE, AND/OR THE DISREGARD OF THE SAFETY AND OPERATION GUIDELINES IN THIS DOCUMENT VOIDS THE ADJ PRODUCTS, LLC WARRANTY, AND ARE NOT SUBJECT TO ANY WARRANTY CLAIMS AND/OR REPAIRS, AND MAY ALSO VOID THE WARRANTY FOR ANY NON-ADJ PRODUCTS, LLC DEVICES. KEEP FLAMMABLE MATERIALS AWAY FROM DEVICE.

**DRY LOCATIONS USE ONLY!
DO NOT EXPOSE DEVICE TO RAIN, MOISTURE, AND/OR SEVERE ENVIRONMENTS!
DO NOT SPILL WATER AND/OR LIQUIDS ON OR INTO THE DEVICE!**

AVOID brute force handling when transporting or operating.

DO NOT expose any part of the device to open flame or smoke. Keep device away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.

DO NOT use device in extreme and/or severe environments.

DO NOT shake fixture, avoid brute force when installing and/or operating fixture.

DO NOT operate fixture if the power cord is frayed, crimped, damaged and/or if any of the power cord connectors are damaged and do not insert into the fixture securely with ease. NEVER force a power cord connector into the fixture. If the power cord or any of its connectors are damaged, replace it immediately with a new one of similar power rating.

Allow approx. 6” (15cm) between fixture and other devices or a wall for proper cooling.

Always disconnect device from main power source before performing any type of service and/or cleaning procedure. Only handle the power cord by the plug end, never pull out the plug by tugging the wire portion of the cord.

Consistent operational breaks will ensure fixture will function properly for many years.

ONLY use the original packaging and materials to transport the fixture in for service.

MAINTENANCE GUIDELINES

DISCONNECT POWER BEFORE PERFORMING ANY MAINTENANCE!

CLEANING

Frequent cleaning is recommended to insure proper function, optimized light output, and an extended life. The frequency of cleaning depends on the environment in which the fixture operates: damp, smoky, or particularly dirty environments can cause greater accumulation of dirt on the fixture's optics. Clean the external lens surface regularly with a soft cloth to avoid dirt/debris accumulation.

NEVER use alcohol, solvents, or ammonia-based cleaners.

TROUBLESHOOTING

Listed below are a few common problems the user may encounter, with solutions.

Unit not responding to DMX:

1. Check that the DMX cables are connected properly and are wired correctly (pin 3 is "hot"; on some other DMX devices pin 2 may be 'hot'). Also, check that all cables are connected to the right connectors; it does matter which way the inputs and outputs are connected.

MAINTENANCE

Regular inspections are recommended to insure proper function and extended life. There are no user serviceable parts inside this fixture. Please refer all other service issues to an authorized Elation service technician. Should you need any spare parts, please order genuine parts from your local Elation dealer.

Please refer to the following points during routine inspections:

- A detailed electrical check by an approved electrical engineer every three months, to make sure the circuit contacts are in good condition and prevent overheating.
- Be sure all screws and fasteners are securely tightened at all times. Loose screws may fall out during normal operation, resulting in damage or injury as larger parts could fall.
- Check for any deformations on the housing, color lenses, rigging hardware, and rigging points (ceiling, suspension, trussing). Deformations in the housing could allow for dust to enter into the fixture. Damaged rigging points or unsecured rigging could cause the fixture to fall and seriously injure a person(s).
- Electric power supply cables must not show any damage, material fatigue, or sediments.

NEVER remove the ground prong from the power cable.

DESCRIPTION

The MB DMX II motor can control up to 4 units simultaneously and allow for a synchronized motor rotation and universal speed. Circuit Breaker protection is included. The MB DMX II motor is meant for indoor use only.

The MB DMX II comes with 2 DMX channels: 1 channel to adjust the motor speed/direction of the mirror ball, and 1 channel to turn the pinspots on and off. 1/4" socket is offered for On/Off control with optional UC IR controller (mirror ball and UC IR remote not included).

FEATURES

- Micro-Stepping Motors for Smooth Rotation
- Uses Two DMX Channels
- DMX-512 Protocol Compatible
- Variable Head Rotation Speed
- Built-In Rigging Point
- Stand-Alone or Primary/Secondary Operation
- Linkable
- Two Built-In DMX Controlled AC Power Sockets
- Heavy Duty Mirror Ball Motor
- Rated for 20" Mirror Balls
- UC IR & Airstream Control (Sold Separately)

DMX SETUP

Power Supply: Before plugging your unit in, be sure the source voltage in your area matches the required voltage for your ADJ MB DMX II.

DMX-512: DMX is short for Digital Multiplex. This is a universal protocol used by most lighting and controller manufactures as a form of communication between intelligent fixtures and controllers. A DMX controller sends DMX data instructions from the controller to the fixture. DMX data is sent as serial data that travels from fixture to fixture via the DATA “IN” and DATA “OUT” XLR terminals located on all DMX fixtures (most controllers only have a DATA “OUT” terminal).

DMX Linking: DMX is a language allowing all makes and models of different manufactures to be linked together and operate from a single controller, as long as all fixtures and the controller are DMX compliant. To ensure proper DMX data transmission, when using several DMX fixtures try to use the shortest cable path possible. The order in which fixtures are connected in a DMX line does not influence the DMX addressing. For example; a fixture assigned a DMX address of 1 may be placed anywhere in a DMX line, at the beginning, at the end, or anywhere in the middle. Therefore, the first fixture controlled by the controller could be the last fixture in the chain. When a fixture is assigned a DMX address of 1, the DMX controller knows to send DATA assigned to address 1 to that unit, no matter where it is located in the DMX chain.

Data Cable (DMX Cable) Requirements (For DMX Primary/Secondary Operation): DMX controller and unit require an approved DMX-512 110 Ohm Data cable for data input and data output. We recommend Accu-Cable DMX cables. If you are making your own cables, be sure to use standard 110-120 Ohm shielded cable

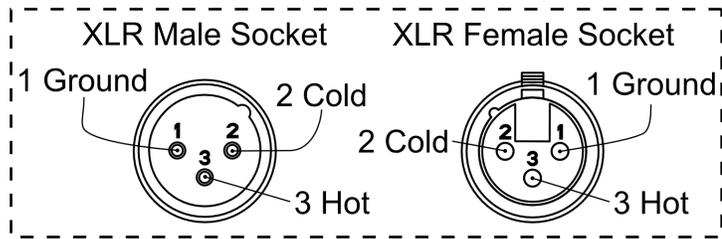

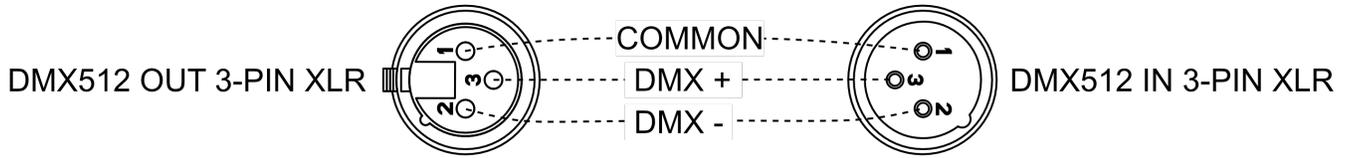

(This cable may be purchased at almost all professional sound and lighting stores). Your cables should be made with a male and female XLR connector on either end of the cable. Also remember that DMX cable must be daisy chained and cannot be split.

DMX SETUP

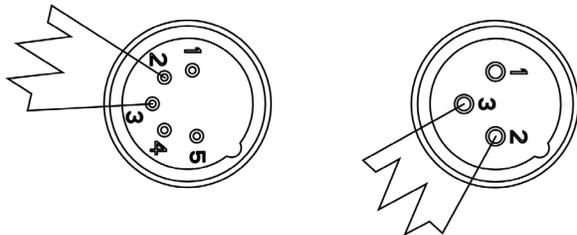

3-Pin to 3-Pin Cable

Notice: When making your own cables, do not use the ground lug on the XLR connector. Do not connect the cable's shield conductor to the ground lug, or allow the shield conductor to come in contact with the XLR's outer casing. Grounding the shield could cause a short circuit and erratic behavior.

XLR Pin Configuration	
Pin 1 =	Ground
Pin 2 =	Data Compliment (negative)
Pin 3 =	Data True (positive)

Special Note: Line Termination. When longer runs of cable are used, you may need to use a terminator on the last unit to avoid erratic behavior. A terminator is a 110-120 ohm 1/4 watt resistor which is connected between pins 2 and 3 of a male XLR connector (DATA + and DATA -). This unit is inserted in the female XLR connector of the last unit in your daisy chain to terminate the line. Using a cable terminator (ADJ part number Z-DMX/T) will decrease the possibilities of erratic behavior.

A DMX512 terminator reduces signal errors, avoiding most signal reflection interference. Connect PIN 2 (DMX-) and PIN 3 (DMX+) of the last fixture in series with a 120 Ohm, 1/4 W Resistor to terminate the DMX512.

3-Pin to 5-Pin Cable Adapter

Some manufactures use 5-pin DMX- 512 data cables for DATA transmission in place of 3-pin. 5-pin DMX fixtures may be implemented in a 3-pin DMX line. When inserting standard 5-pin data cables in to a 3-pin line a cable adaptor must be used, these adaptors are readily available at most electric stores. The graphic and chart below detail a proper cable conversion.

3-Pin XLR to 5-Pin XLR Conversion		
Ground/Shield	Pin 1	Pin 1
Data Compliment (- signal)	Pin 2	Pin 2
Data True (+ signal)	Pin 3	Pin 3
Not Used		Do Not Use
Not Used		Do Not Use

OPERATION

Operating Modes:

The MB DMX II may be operated in three different modes. Always be sure to disconnect the power supply after changing the operating mode to allow the unit to reset to the new operating mode. Failure to disconnect the power supply after changing the operating mode may cause the unit to function improperly.

- **Stand alone mode** - The unit will rotate to the pre-defined speed set with the dip switches. You can also use the optional UC IR remote (sold separately) to control various functions.
- **Primary/Secondary mode** - You can daisy chain up to 16 units together to get synchronized motor rotation. You can also use the optional UC IR remote to control various functions.
- **DMX control mode** - This function will allow you to control each unit's individual traits with a standard DMX 512 controller.

Stand Alone Mode:

This function allows a single unit to operate to any of the presets using the dipswitches. Only use this function when running a single unit, or when running several units as individuals. Please note this function does not allow individual control of the DMX traits.

1. To activate the Stand-Alone mode, locate the dipswitches on the side of the unit and flip dipswitch 10 to the "on" position.
2. Follow the dipswitch chart to select a preset speed and to control mirror ball rotation direction.
3. Attach the mirror ball to the motor and connect main power.
4. The optional UC IR remote (sold separately) may also be used to control the motor.`

Primary/Secondary Mode:

This function will allow you to link up to 16 units without the use of an external controller. In a Primary/Secondary set up one unit will act as the controlling unit and the others will react to the controlling units presets. Any unit can act as a Primary or as a Secondary. Please note this function does not allow individual control of the DMX traits and will only run to the units built-in programs.

1. Using standard XLR microphone cables, as described on pages six and seven, daisy chain your units together via the XLR connectors on the rear of the units. Remember the Male XLR connector is the input and the Female XLR connector is the output. The first unit in the chain (primary) will use the female XLR connector only. The last unit in the chain will use the male XLR connector only. For longer cable runs we suggest a terminator at the last fixture.
2. Select a MB DMX II to be the "primary" unit. Locate the dipswitches on the side of the unit and flip dipswitch 10 to the "on" position.
3. Follow the dipswitch chart on page 13 to select a desired rotation speed and direction. Be sure to note that this selection will be universal throughout all motors in the chain.
4. For all other motors in the chain (secondary) located the dipswitches on the side of the units and be sure dipswitch 10 is in the "off" position.
5. Connect main power to all the motors and they will immediately begin to rotate to the presets of the "primary" unit.
6. The optional UC IR remote (sold separately) may also be used to control the motor.

OPERATION

Universal DMX Control:

This function allows you to use a universal DMX-512 controller to control rotation speed, rotation direction, and the built-in power sockets (usually for pinspots). Operating through a DMX controller allows you the freedom to create unique and customized programs tailored to your specific individual needs.

1. The MB DMX II uses two DMX channels. Channel one controls power sockets located on the side of the unit. Channel two control the motor's rotation speed and direction.

2. To control your motor in DMX mode, follow the set-up procedures on pages 8 - 9, as well as the set-up specifications that are included with your DMX controller.
3. Use the DMX controller's faders to control the various DMX fixture traits. A list of the DMX traits and values is located on page 17.
4. This will allow you to create your own programs.
5. When using a DMX controller and setting up for DMX operation follow the DMX addressing procedure in your controller's manual. All fixtures must follow a specific DMX addressing protocol for proper operation in DMX mode.
6. For help operating in DMX operation consult the manual included with your DMX controller.
7. For longer cable runs (more than a 100 feet) use a terminator on the last fixture.

UC IR & AIRSTREAM APP CONTROL

The UC IR (sold separately) infrared remote gives you control of various functions (See below). To control the fixture you must aim the remote at the front of the fixture and be no more than 30 feet away. To use the ADJ UC IR you must first connect the included IR receiver cable. Connect this cable to the mini input jack located on the side of the unit near the dipswitches.

The Airstream IR (sold separately) remote transmitter plugs into the headphone jack of your iOS phone or tablet. To control your IR fixture you must raise the volume to the maximum on your iOS phone or tablet and aim the transmitter at the fixture sensor and be no more than 15 feet away. After you have purchased the Airstream IR transmitters, the app is a free download from the app store for your iOS phone or tablet. The app comes with 3 pages of control depending on the fixture you are using. Please see below for IR functions including the corresponding app page.

Works with App page 1.

STAND BY - Pressing this button will turn the remote control option On and Off.

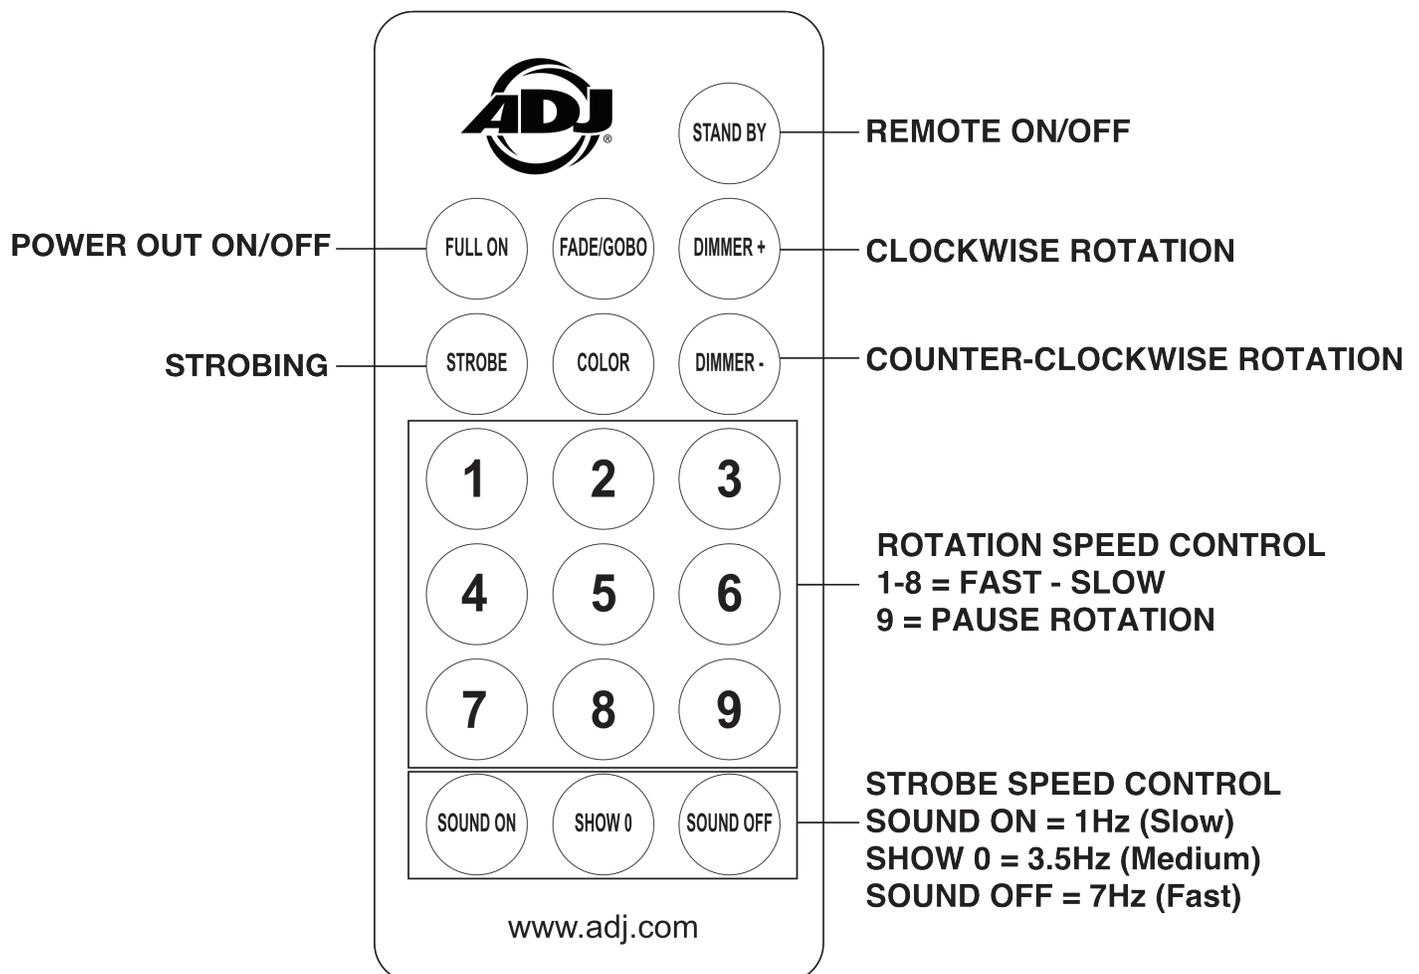

FULL ON - This will turn a connected light On and Off. **FADE/GOBO** - This button is invalid.

"DIMMER +" and **"DIMMER -"** - "Dimmer +" will rotate the ball clockwise and "Dimmer -" will rotate the ball counter-clockwise.

STROBE - Press this button to activate strobing. **COLOR** - This button is invalid.

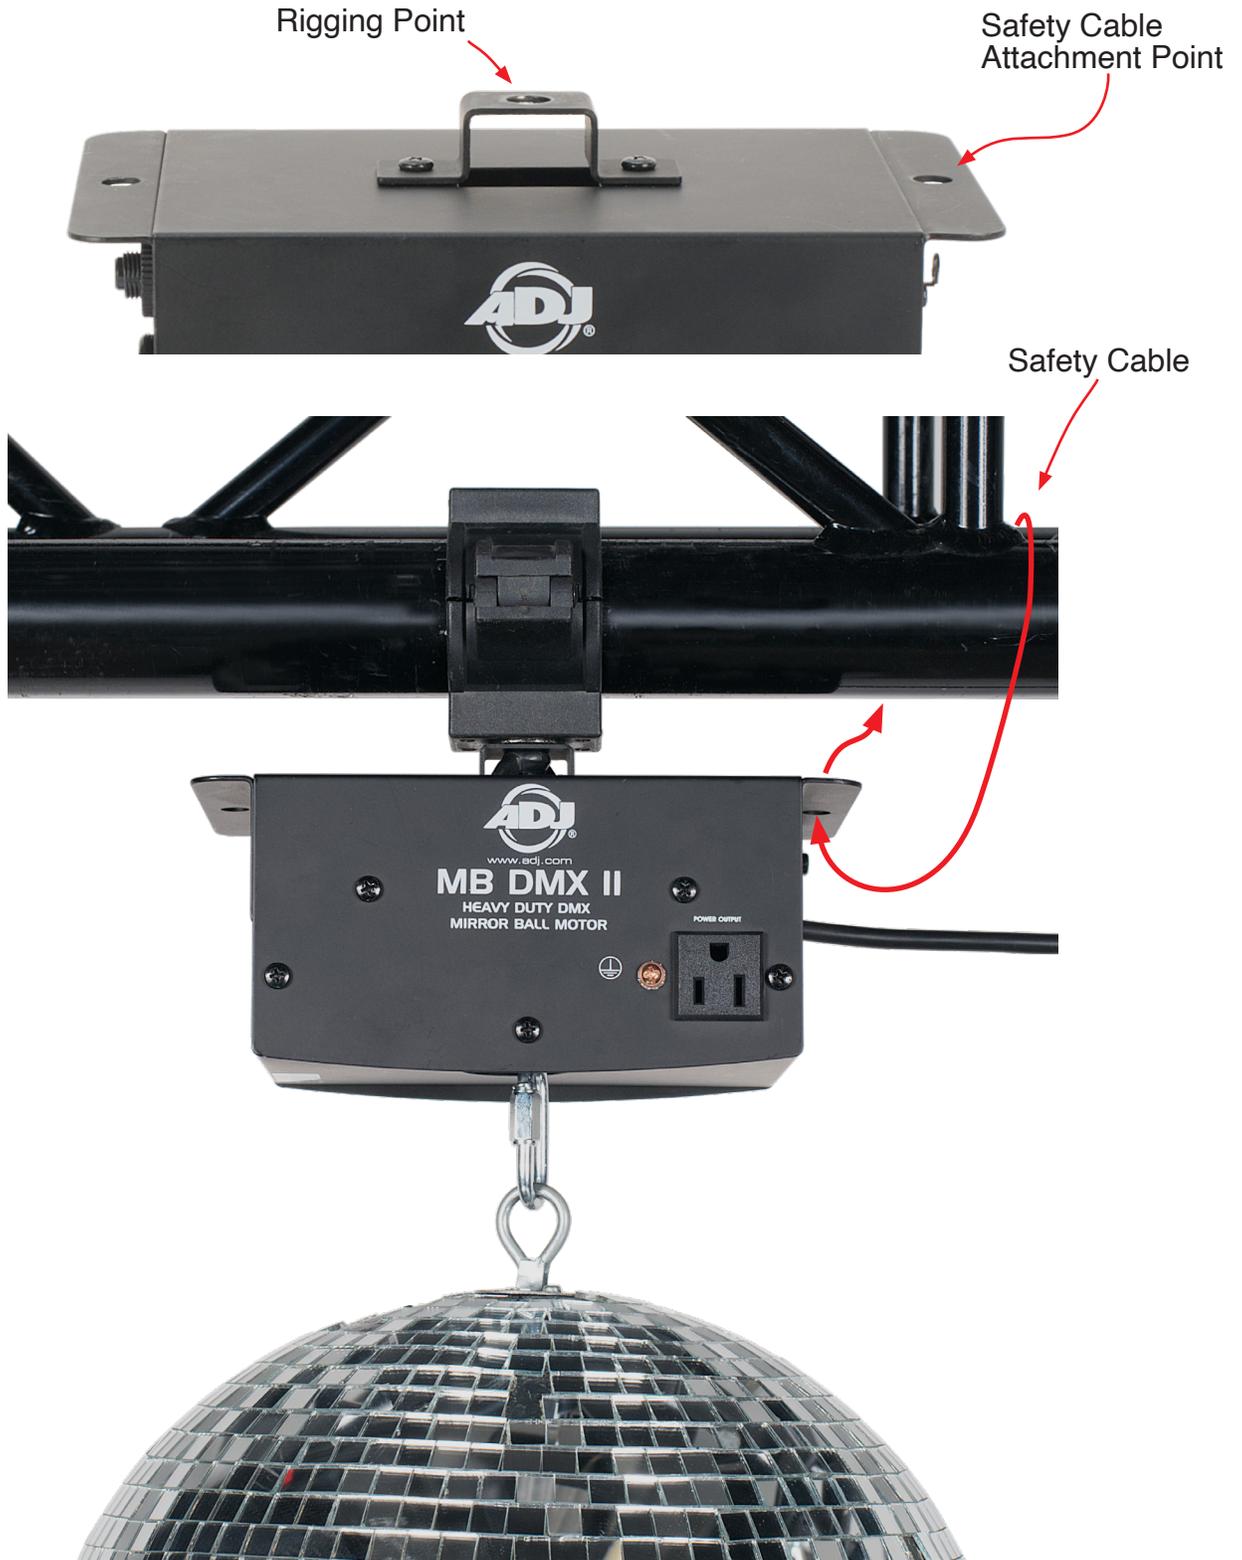

1-9 - Use buttons 1-8 to select your rotation speed. "1" being the fastest and "8" being the slowest. "9" will pause/stop the motor from rotating.

SOUND ON & OFF & Show 0 - These buttons will control the strobe rate of a connected pinspot. Sound On is slowest strobe speed, Show 0 is medium speed, and Sound Off is the fastest speed.
Sound On - 1Hz Show 0 - 3.5Hz Sound Off - 7Hz

MOUNTING

The MB DMX II ships with a built-in rigging point, and two large holes in the base of the unit used as safety cable attachment points. The rigging point is located on the top of the unit. This rigging point is secured to the fixture by two large Phillips screws. When the rigging point is not used, as when the fixture is shipped from the manufacture, the rigging point is shipped inverted (inside the top of the unit). When the fixture is hung from a truss or or similar means, use the rigging point, and secure the fixture with safety cables. The MB DMX II is to mounted in bottom-up position to a ceiling, or may hang from the truss using a C-Clamp rated at 50 pounds or higher.

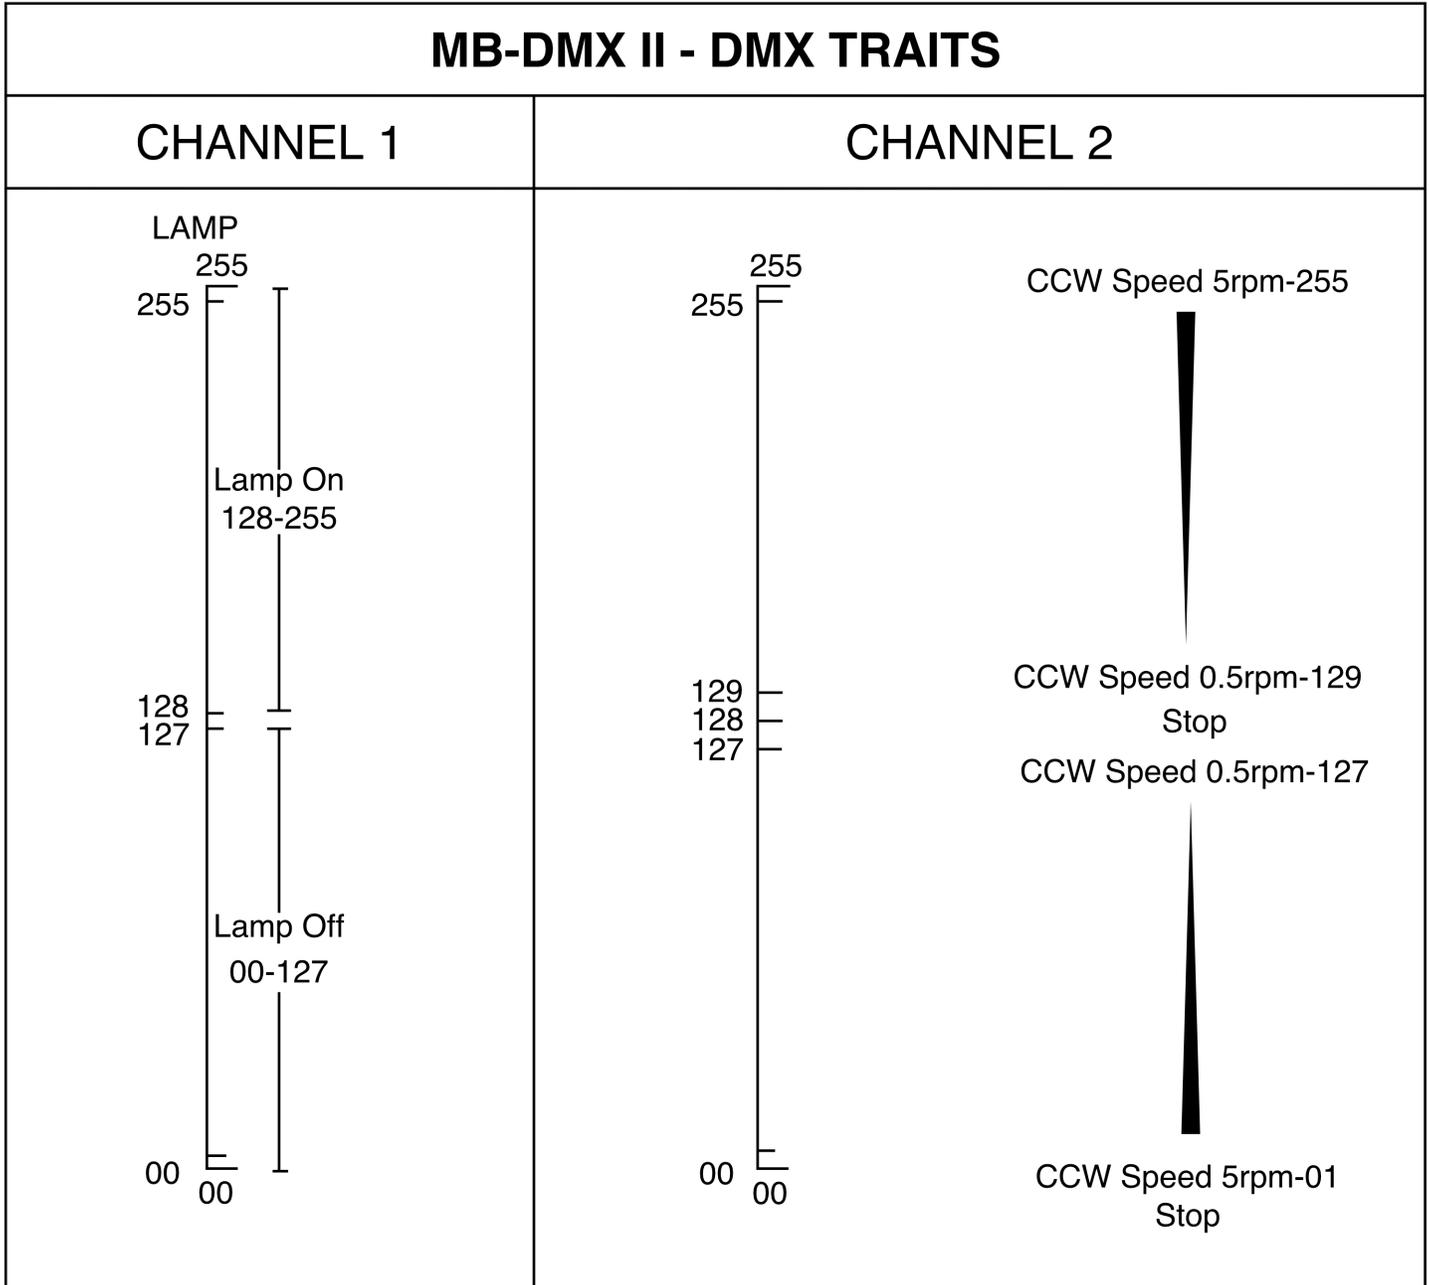

CIRCUIT BREAKER

This unit is equipped with a 3A Circuit Breaker, or GFI (Ground Fault Interrupt). This circuit breaker is designed to close the power circuit in the event of an internal short or power surge. This will reduce the risk of electrical shock or fire and protect the circuitry. To reset the breaker, push the button until you hear it “pop” back. If the breaker continues to pop, stop using the unit and contact our customer support team, the unit may need to be returned for service.

DMX TRAITS: CHANNEL FUNCTIONS AND VALUES

The chart below details the DMX traits in depth. The individual trait can only be accessed by using a universal DMX controller. Note: "Lamp" in channel 1 refers to the power socket located on the front of the motor (this socket is intended to be used with lamps that illuminate up the mirror ball).

DIPSWITCH SETTINGS

The charts below details the Primary/Secondary setting for Primary/Secondary configuration. Use this configuration when you will be using two or more fixtures in a Primary/Secondary configuration. Note: The “Primary” settings should only be used once at the first motor, using the “Primary” setting more than once in the chain may result in erratic operation.

	DIP1	DIP2	DIP3	DIP4	DIP5	DIP6	DIP7	DIP8
SPEED (0.5)	ON	OFF						
SPEED (1 rpm)	OFF	ON	OFF	OFF	OFF	OFF	OFF	OFF
SPEED (1.5 rpm)	OFF	OFF	ON	OFF	OFF	OFF	OFF	OFF
SPEED (2 rpm)	OFF	OFF	OFF	ON	OFF	OFF	OFF	OFF
SPEED (2.5 rpm)	OFF	OFF	OFF	OFF	ON	OFF	OFF	OFF
SPEED (3 rpm)	OFF	OFF	OFF	OFF	OFF	ON	OFF	OFF
SPEED (4 rpm)	OFF	OFF	OFF	OFF	OFF	OFF	ON	OFF
SPEED (5 rpm)	OFF	ON						

- Dipswitch 9 Control Rotation Direction
ON = CW Rotation / OFF = CCW Rotation
- Dipswitch 10 Controls Primary/Secondary Operation:
ON = Primary / OFF = Secondary
Note: Dipswitch 10 must be in the off position for DMX operation
- The optional MINI=C may be used during Primary/Secondary operation to stop motor rotation and to blackout the electrical sockets.

DMX ADDRESS QUICK REFERENCE CHART

This chart lists DMX dip switch settings for DMX address 1 through 511. Follow the instructions below to configure fixture dip switches with the desired DMX Address.

DMX ADDRESS QUICK REFERENCE CHART

The center numbers of this chart (1-511) represent a DMX address. The Xs and Os along the top and the side of the chart represent dip switch position ("X" for OFF and "O" for ON). Find the desired DMX address from the center chart. Identify the position for dip switches 1-5 from the chart on the left and dip switches 6-9 from the chart on the top. Adjust the dip switches on your fixture to match the position settings of the chart. For fixtures with 10 dip switches; dip switch 10 is reserved for special functions.

SPECIFICATIONS

- Heavy Duty DMX Mirror Ball Motor
- Includes two 3-prong Edison socket to power Pinspots
- 2 DMX Channels:
- Channel 1: Turns On/Off Pinspots
- Channel 2: Adjustable motor speed and direction control of mirror ball; For use with up to a 20-inch mirror ball
